

Carbon Fibre

How to use: Carbon Fiber is a carbon fiber reinforced 2-comp. polyester putty, easy to apply and grind, completely without pores.

Pre-treatment: The surface is degreased with Hagman's Silicone removal, sanded and, as a finish, degreased again.

Mixing: First stir the product in the can. Comp. A is mixed with 2–3% comp. B. Do not overdose! Do not mix more at a time than what is consumed within 5 minutes.

Application: With sheet metal or rubber seal. Best working temperature 20 ° C. Tools can be cleaned with thinner.

Finishing: After approx. 15 min. at 20°C, the putty can be sanded. Start with 120 grains and finish with 320-400 grains for best results.

Shelf life: 18 months. Keep cool.
