

Carosol Tunt Rostskyddsvax

Product Description:

A light-coloured rust preventive with a wax and oil base. The product should be applied using a spray gun or paintbrush.

Due to its low viscosity, the product can easily penetrate cracks, hidden pockets between panels and beams, cavities and doorsill-boxes. The rust preventive does not damage paintwork. If, however, some of the product is accidentally applied to the paintwork, it can be removed using white spirit or cold degreaser.

Range of Applications:

Hagmans Tunt Rostskyddsvax is ideal for use as a base-coat for Hagmans Tjockflytande Rostskyddsvax. Other appropriate applications include parts of machinery, tools, implements etc.

Technical Data:

Base material: Wax
Density: 0.850 kg/l
Material consumption: 50 - 100 ml/m²
Drying time: 4-6 hours for an approx. 100 µm thick layer
Shelf-life: 1 year

Preparation:

Surfaces to be treated should be thoroughly clean and dry. Shake the container well before applying the product.

Application:

Should ideally be applied in layers of 50-100 µm, which is equivalent to 50 - 100 ml/m². The product forms a tacky surface in about 4-6 hours when applied, for example, to a flat sheet-metal surface.
