

Golvtvätt

Hagmans Golvtvätt (floor wash) is an effective alkali cleaning agent for floors. It is used to clean surfaces prior to painting or repainting, but also for maintenance cleaning and will effectively remove oil, grease, dirt, etc. Spread Golvtvätt on the floor and let it work for a few minutes; then work the surface with a mop, brush or cleaning machine. Rinse the floor thoroughly, preferably with a high pressure washer, so that all dirt and cleaning agent residues are removed. Repeat the treatment if necessary.

Basic material:	Tensides
Density:	1.01 kg/l
Material consumption:	
1 litre covers between 5 – 15 m ² .	
pH:	ca 9.5
